

Door Murals

Crockery design for kitchen-type usage or bookshelf for common-room application

Designed to camouflage doorways

Ideally suited to dementia patients, a full-size photographic mural can be used to camouflage doors or doorways that lead to areas where someone may be at risk.

Doors leading to stairways, rooms or cupboards storing items may pose a danger to those suffering from dementia or cognitive impairment. These murals help to camouflage the door and deter someone from entering unnecessarily.

Measuring 2100 x 900 mm, there are two images available – a bookshelf or a crockery shelf. The murals are self-adhesive and can easily be trimmed to fit most doors. Easy to install, the adhesive vinyl will not rip or tear and can be removed and reinstalled as often as needed.
