

Room Monitor

The Oricom Room Motion Monitor uses DECT technology (Digital Enhanced Cordless Telecommunications), a widely used digital cordless technology for clear sound, long range and maximum voice security.

Designed for use with a baby, this product is ideal for anyone who may require monitoring. The Oricom monitor is sensitive enough to pick up sounds of movement or restlessness, as well as a cry for help. Carers can move freely around the home while remaining in constant contact with the patient, with the added comfort of two

way talk back for immediate response.

DECT operates on the 1.8GHz frequency, which eliminates potential interference from other common wireless devices such as wireless networks (Wi-Fi), bluetooth and cordless computer devices.

Features fully adjustable digital volume control, soft adjustable night light, sound sensitive light display plus an out of range / low battery warning. With average operation of up to 20 hours, the receiver includes rechargeable batteries (supplied), which are automatically recharged when the receiver is placed in the cradle.

ITEM	Room Motion Monitor
CODE	ED0051
RAP	BF08
COLOUR	Purple and white
WARRANTY	3 year
